

Everything you need to develop
a flexible HF RFID solution

The Proxima RF™ Starter Kit is a practical solution for demonstrating the potential of a proximity application and provides you with the tools to integrate RFID with your existing systems using a simple, clear XML based API. For developers wanting to focus on implementation and reduce the time-to-market, these are ideal solutions, including a full warranty and complete software support package.

The Starter Kit includes:

- Proxima RF™ Desktop Plug & Play USB 13.56 MHz RFID Reader
- Assortment of demonstration tags
- 4 Ready to use demo applications
- Custom demo application tool
- XML Based Universal API

Demonstration Tools

The ability to demonstrate product capability and return on investment speeds end user adoption.

Our Starter Kit includes out of box demo tools for:

- Asset control
- Personal identification
- Maintenance
- Inventory tracking

Our custom demo application tool allows you to quickly create personalized demo applications. Simply insert your client's logo and product image on the screen and see their excitement from the first demonstration of your application.
